

Results Series BXT216 Treadmill: Why aren't the heart rate contact plates working?

ID: 12217.2

Follow this troubleshooting guide to help resolve issues with the heart rate contact sensors on the Results Series BXT216 Treadmill.

Some common complaints may include:

- Heart rate does not register
- Heart rate is erratic or intermittent

Follow these steps to troubleshoot the issue

1. Ensure your hands are centered on the heart rate sensors with equal pressure. Try to move as little as possible without touching the metal frame [\[12217.A\]](#).
2. Dry or heavily calloused hands may need a heart rate cream to make better contact. **Buh-Bump Heart Rate Cream** is a recommended cream to use and can be found at various retailers online [\[12217.B\]](#).
3. Check that the connections between the handlebars and the console are secure [\[12217.C\]](#).
4. Your heart rate may spike at a high rate when initially touching the contact plates. This is normal and will level out after a couple of minutes. Try to keep your hands still during this time [\[12217.D\]](#). If you need a quicker heart rate reading, a heart rate chest strap monitor may be a better option. If you do not have one already, you can [order a Heart Rate Chest Strap](#) (see [Heart Rate Monitor Compatibility by Model](#)) [\[12217.E\]](#).
5. Move all devices generating wireless or Wi-Fi signals into another room, preferably on the other side of the house. This includes the wireless chest strap [\[12217.F\]](#).
